Burndown Chart

How to read this chart

1.Did your estimations reflect the actual effort?

Ans: Yes. The estimated story points closely matched the actual effort since all planned tasks were completed within the sprint.

2. Was your backlog well-prioritized?

Ans: Yes. The backlog was prioritized correctly because important tasks such as resume upload, CGPA check, skill check, interview scheduling, and offer letter access were completed in sequence

3. How did your simulated sprint align with your plan?

Ans: The sprint aligned well with the plan. All selected stories moved from the backlog to completion without major delays or unfinished work.

4. What insights did the burndown chart give about your team's capacity?

Ans: The burndown chart showed a steady reduction in remaining work, indicating that the team had sufficient capacity to complete the sprint on time and maintain a consistent pace.
